

Lii for Versati-Lii-ty

With conference attendees facing the possibility of spending hours sat in the same chair, it makes sense the more comfortable the chair, the easier they will be able to concentrate on what's

being said rather than their aches and pains! Comfortable conference chairs tend to be heavy and cumbersome and their space saving, foldable alternatives, although lighter, are notoriously uncomfortable! In response to this conundrum, Mesh Office Seating (UK) Ltd introduced the versatile Lii chair, a comfortable, space saving guest chair and a lightweight pull-up for the conference room!

As it is 97% recyclable, the Lii chair is also the greener option and the design benefits from Greenguard Environmental Certification.

The chair is available in two designs: four-legged or cantilever.

Four-legged Design:

With the four-legged Lii design, the seat folds up neatly for compact storage. The four-legged option is an innovative design for the space conscious environment and conveniently easy to move. This sleek, lightweight, nesting design is offered with a choice of castors or glides.

Cantilever Design:

The cantilever Lii option is the perfect lightweight, pull-up chair for the conference room or boardroom. This design would look equally at home in a reception or breakout area.

Both designs, four-legged and cantilever, feature a body responsive floating back, providing optimum comfort. There is a choice of three finishes: black, white or the classic polished frame. As with the other office chairs in the Mesh Office Seating range there are a wide variety of colour options with a choice of mesh or fabric for the seat.

Mesh Office Seating (UK) Ltd are the sole authorised distributors of a widely acclaimed and globally recognised range of office chairs including the Ergohuman and the recently launched Skate chair for the contract market.
